*"Things should be made as simple as possible,
but not one bit simpler"*
Albert Einstein

Riyadh Geotechnique and Foundations (RGF) is a specialist engineering and contracting company established under the laws of the Kingdom of Saudi Arabia. RGF possesses quality expertise reflected in its management and staff of over 300 specialized engineers and technicians who have worked for over three decades on developmental projects in the Kingdom of Saudi Arabia and across the Middle East.

Armed with such expertise, RGF grew as a specialist contractor in deep foundations and drilling and testing services. These services presently include such specialized work as driven and bored piles; ground improvement including stone columns, anchoring, shoring and dewatering of deep excavations; subsurface exploration including drilling and testing; materials testing including Non-Destructive Testing (NDT); and Cathodic Protection.

RGF's main thrust is the attainment of our client's complete satisfaction. Our approach to every project we undertake is characterized by examining opportunities for introducing appropriate new ideas and technologies that would expedite the work and deliver the final product in the most cost effective and high quality manner.

In the following sections, we present a spectrum of the services we provide in the fields of ground engineering, site investigation, testing, structural repair and protection.
